## PROJECTS

### Stress Detection in IT Professionals Through Facial Image Analysis

This project aims to detect stress in IT professionals using machine learning and image processing. Unlike traditional systems, it offers real-time detection and periodic analysis of both physical and mental stress, with tailored remedies through regular surveys. The goal is to improve workplace well-being and optimize productivity.

### Memory Game

It is a game where the player has to flip over a pair of cards with the same number. The play method runs the loop, prompting the user to choose two cards and reveal them, and do a check. If the two cards match the game will continue otherwise, cards will flip back again. The main objective in this game is to find all pairs of cards with the fewest number of moves.
